## For Building Castles in the Air {Citiblocs Review}

Nothing would make Grandpa happier than for one of his grandkids to become an engineer like him. I've noticed that one of my girls in particular loves to line up and stack up things, so maybe he's got a shot at it. It was no surprise that she squealed and did her happy dance (marching her feet and flapping her arms like a bird) when I showed her the [Citiblocs](#) we received!

Citiblocs are made of Grade A Radiata Pine from certified renewable forests in New Zealand. They are non-toxic and require no glue, snaps, or any other parts. They're precision-cut and perfectly balanced. All you need to do is supply the creativity, and along with gravity, Citiblocs will do the rest. Citiblocs seem to be a simple set of blocks at first glance, but look at what you can make...these are just a few amazing examples!

My girls are still young so they aren't constructing the Golden Gate Bridge yet, but their imaginations are taking off. Their two favorite things to build are their kiddie versions of "choo-choo tracks" and a "castle" (the one they're building here also had a drawbridge). Grandpa is very proud of them!

[Citiblocs](#) come in sets of 52 up to 1000 pieces (!! ) as well as 54-piece sets in different color combinations.

Citiblocs have been awarded 14 industry awards acknowledging the toy's green and innovative qualities. Citiblocs are definitely a toy destined to become a new classic, and will remain a favorite in your home for years to come!
